Retain 4.1.0.1 Release Notes

1. Introduction

The document communicates all changes in the patch release of Retain 4.1.0.1.

2. About This Release

Retain 4.1.0.1 is a patch update. It is targeted at minor bug fixes.

3. Upgrades

Upgrading to Retain 4.1.0.1 is a very simple process from previous Retain 4.x installations. Please follow the standard upgrade procedure outlined in the product manual. Anyone running a Retain version that is not 4.x, should refer to the "Upgrading to Retain 4" documentation available online or contact support@gwava.com

4. Bug Fixes

The following issues have been addressed and resolved in this update:

4.1 Modified implementation of message storage flags to prevent unnecessary full mailbox dredges

4.2 Corrected problem that prevented Retain from reading the membership of Exchange/Office 365 Distribution Lists

4.3 Fixed a null pointer exception in the Worker for Exchange jobs

4.4 Implemented the "Don't Advance Timestamp" option in the profiles for Exchange/Office 365, Google Apps/G Suite and BlackBerry profiles

4.5 Corrected problem where the setting for Index Optimization was not being honored

4.6 Fixed issue where the "Set Last Access Date" option for iCAS was disabled after Retain update

4.7 Corrected issue for G Suite/Google Apps where the "archived" date was being set as the "delivered" and/or "relevant" date

4.8 Fixed problem where search queries were using the new indexes instead of the old indexes during the index migration process

4.9 Fixed problem for GroupWise jobs where unread messages that generated an error during the archive process could have the status set to "read"

4.10 Modified the licensing report to exclude accounts that have no archived data present
